

4/19/20  
Lexicon Solutions  
Portland, OR

I am submitting my resume and application to confirm my strong interest in the Process Engineer II position.

I am an Engineer in Training (chemical) currently working as a process engineer for Sonoco Products Company in Wisconsin. I am from Washington and am looking to find a job closer to home.

At my current role, I am accountable for the safe and efficient manufacturing operations of 110+ union employees as a part of the management team. I also directly manage a department of over 15 employees to safely optimize processes using Lean Six Sigma fundamentals, coordinate preventative and general maintenance tasks, and ensure that safe work procedures are being followed.

On top of the operations experience, I lead the plant 5-why process to identify, implement, and control corrective actions to reduce downtime and improve productivity. I also lead the continuous improvement team which generates over \$200,000 in savings per year.

My most recent project has been owning a new process to develop and optimize a new product with a higher profit margin. I use Lean Six Sigma fundamentals to optimize the production of this new product by making decisions based on data gathered from a data historian (Capstone). Since this product is new to the operators, I also get to teach and coach the team on safe and efficient operating procedures.

I get to lead a large and diverse production team to ensure safe and efficient operations at my current role and I would love to do the same for Lexicon Solutions. I believe that my technical experience on top of my excellent people skills will be very useful for this position. I would love the opportunity to move back to the Pacific Northwest and get to work for Lexicon Solutions.

Sincerely,

Hiro Kusakabe
